

ABSTRACT

5 A stretchable raschel-type warp knit fabric is
provided, which is formed of a ground structure of
polytrimethylene terephthalate fiber combined with
elastomeric fiber laid in, wherein the knit fabric has a
number of courses in a range from 100 to 200 courses per
2.54 cm, and a product of the number of courses and the
number of wales per 2.54 cm in a range from 4,000 to
10 8,000. This knit fabric is free from yellowing, is soft
in touch as well being as free from the generation of
grinning and is suitably used for elastic wear because of
its excellent heat-moldability.
